

## Learning Activity Introduction Ambulatory Surgical Centers

### Introduction

This guide is intended to assist State Agency (SA) Preceptors or Training Coordinators, by providing activities that are designed and developed to supplement the Basic ASC Course on-line for new surveyors.

Each activity contains instructions and resources to conduct the activity with a single new surveyor or within a classroom environment.

Preceptors should try to use these activities in correlation with field experiences and/or basic training topics. In many cases, these activities will provide opportunity for further guided discussion with the new surveyor. You may download and add your State regulations and verbiage to these as well.

Please remember these are training aids only; always refer to the State Operations Manual (SOM) for any regulation guidance.
